VENTILATION

TYPE USV

Universal Soffit Ventilator

- Easy upgrade of existing structures
- Insect screening
- Hidden fixing with cover moulding
- Self coloured corrosion proof

Solution

The Type USV incorporates a direct fixing method from underneath, which is hidden by an attachable feature moulding. This permits the ventilation strip to be secured either to a batten attached to the lower inner face of the existing fascia, or alternatively the strip may be secured directly to the fascia bottom edge.

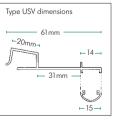

When the moulded attachment is clipped in position, all screw fixings are hidden from view.
